

LFAI Interop Committee Proposal

Zhipeng Huang

Overview

With recent development of the [Pyro](#) project, an incubation project of [LF AI Foundation](#), Julia and MindSpore, it has become evident that AI native programming is the next trend in deep learning framework development. Gone with the old days that mathematical libraries were added to existing engineering toolsets, data scientists will more and more likely to use their familiar toolset with more engineering capability added. AI developers should be able to write the models as the mathematical format without a steep learning curve of software engineering

Problems to solve

1

Northbound Interoperability when the AI Native programming framework is adopted for applications in different areas.

2

Southbound Interoperability when the AI Native programming framework is used on various compute and storage backends

3

Framework Interoperability when traditional deep learning frameworks need to be supported or transformed. (**ONNX**)

4

Build Interoperability when various types of deployment could be reproducible on different pipelines. (**Kubeflow**)

Interop Landscape

Northbound: Interop Among Frameworks (IR, Crypto, Type System, Metadata ...)

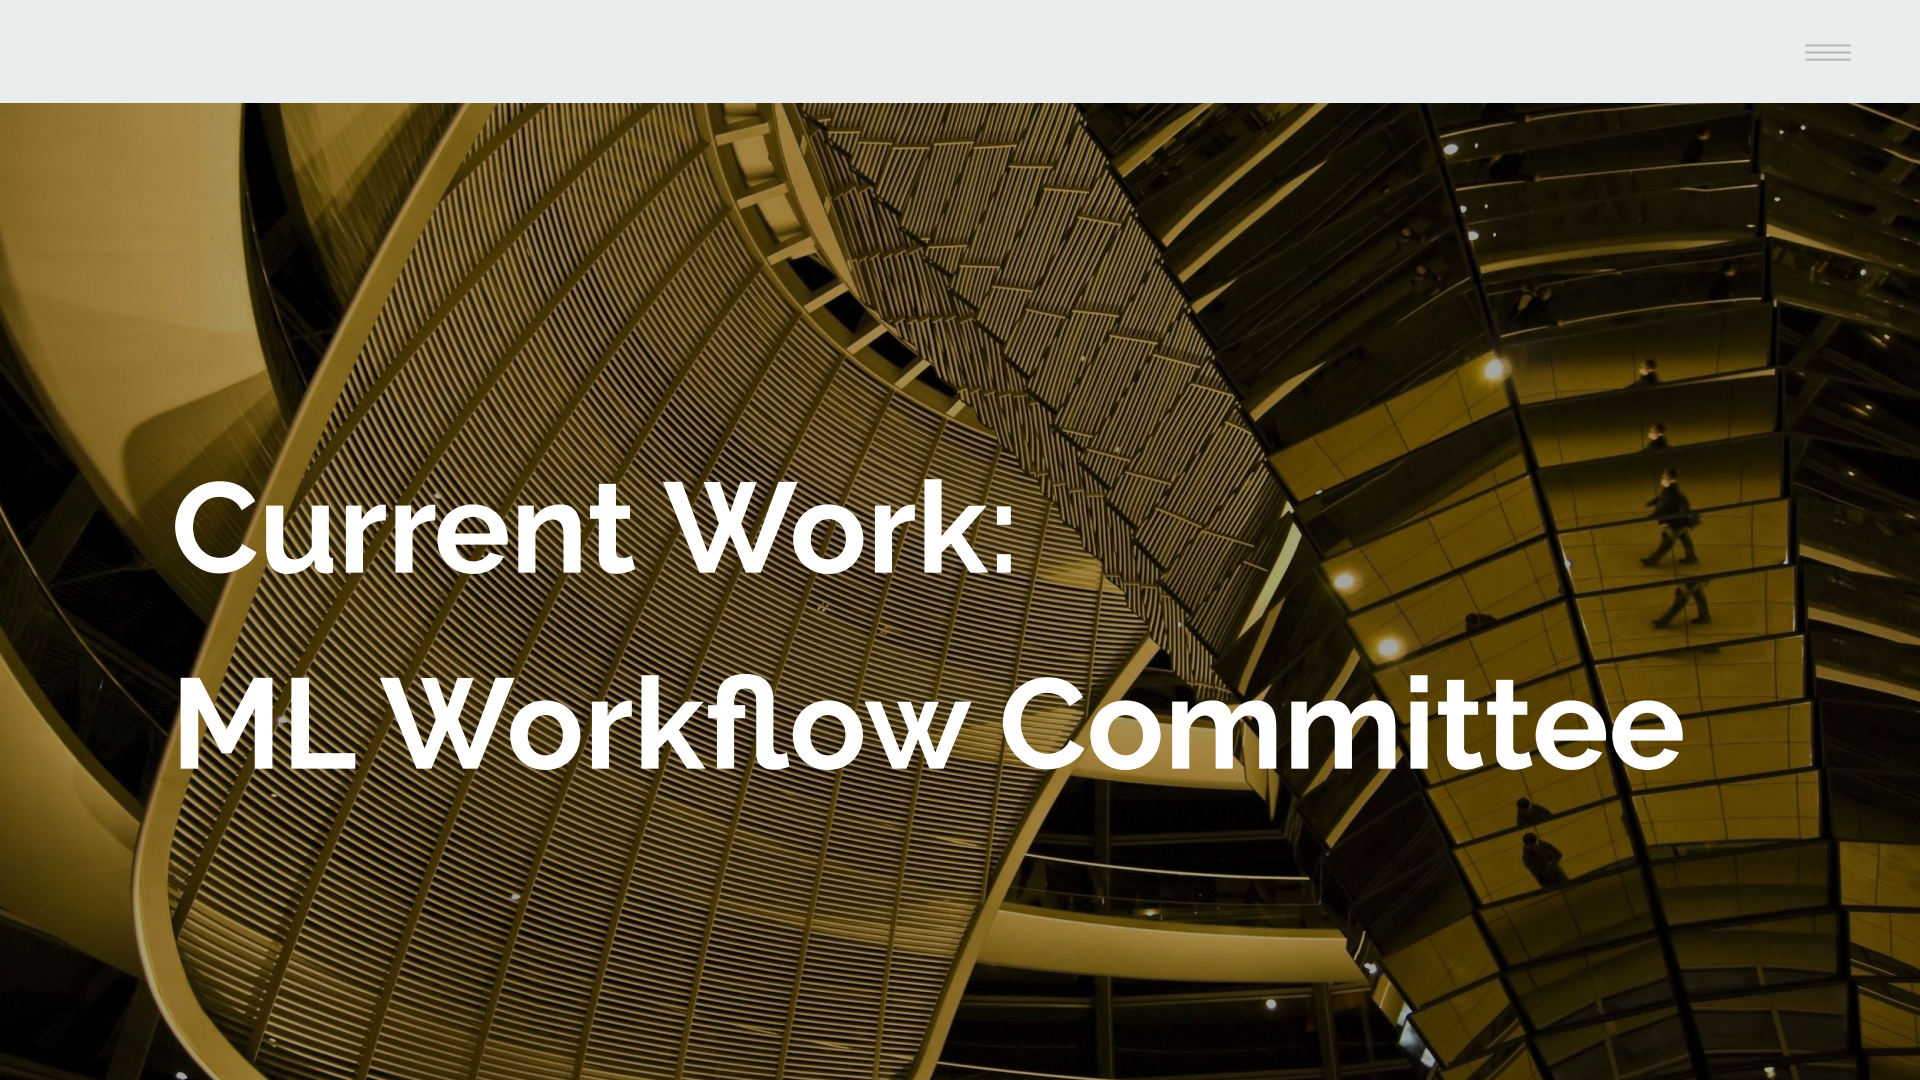

Southbound: Interop Between Frameworks and Backends

A horizontal bar with a teal segment on the left and an orange segment on the right, positioned above the section header.

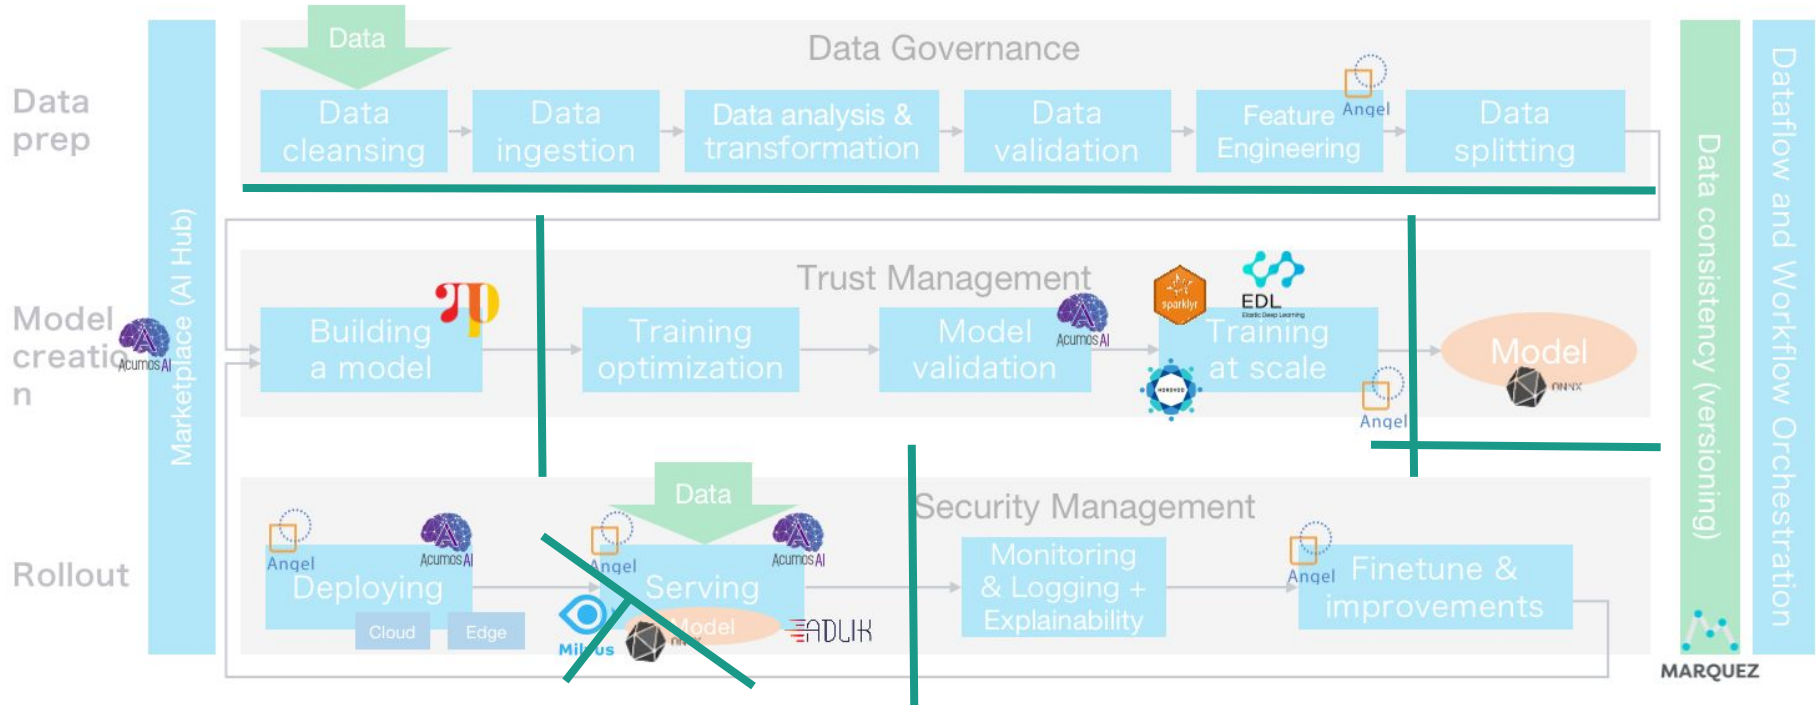

Proposal

We propose LFAI to either create a new committee or adapt an existing one to address the interoperability issue.

Current Work: ML Workflow Committee

ML Workflow Committee - LFAI Stack

**Proposed Work:
Interop Committee**

Interop Committee

Address the northbound and southbound interoperability problem and work with LFAI community at large to solve framework and build interoperability issue

- 01 | Identify the gaps
- 02 | cross community discussion
- 03 | upstream gap-fulfilling development
- 04 | interop specification
- 05 | joint proof of concept

Process (driven by cross community discussion)

Upstream Development

Spec Drafting

Joint PoCs

Timeline

First set of gaps identified

- Federated Learning
- Reinforcement Learning
- ...

First iteration of spec delivered

Proposal For TOC

- Create Interop Committee, or
- Expand ML Workflow Committee's scope to address Interop issue (ML Workflow & Interop Committee ?)

Thank you.
