

Architecture

DRAFT

Review and maintenance of architecture principles

Support two broad audiences:

- External (adopter and partner) audience who would benefit from 'high-level' architectural knowledge to enable them to adopt or contribute to Egeria
- Internal (community) audience that would benefit from sharing of detailed architecture and design material to improve components and interfaces

Cover two scopes of architectural information:

- Component/function scoped architecture/design points - e.g. the open types, discovery, repository connectors, ...
- Cross cutting themes - such as pluggability, dependency management for lean builds, security, ...

The general intention of the Architecture sub-team is to contribute and maintain material on the Egeria web site

We also envisage a regular heartbeat (perhaps once per month) of architecture/design presentations e.g. by a component owner or an adopter - these could be recorded and posted on YouTube etc.
