Innovation

This TSC sub-team is concerned with:

- Establishment of innovative practices.
- Encouragement of 'risk-taking' - so that people feel empowered to try radical ideas, constantly trying to improve aspects of the project - including components, build, distribution, ...
- Highlighting of innovative achievements at the project level, including on the web site but possibly in other forms too.

We could consider the possibility of an 'Egeria Innovator' badge - to be awarded to recognise a track-record of innovative contributions to the project or community.
