

Knowledge sharing

To accelerate adoption, we also recognise the need to accelerate knowledge-sharing on how to make use of Egeria, with a particular focus on initial entry points. This could include:

- Expanding documentation:
 - tutorials
 - [how-to guides](#)
 - interface descriptions
- Making the documentation and examples as directly-usable as possible (e.g. allowing Notebook-based tutorials to be opened directly and experimented with in a hosted environment)
- Using education environments (like EdX) for training and potential certification purposes

As always, we are happy to receive feedback from the community on the highest priority areas in which we can improve: please leave us comments or GitHub issues where you find anything missing or instructions problematic or particularly cumbersome.
